Summary

Platform engineer with expertise in building scalable distributed systems from 0-to-1, supporting millions of users. Experience with infrastructure platforms, APIs, and leading teams in fast-moving environments.

Skills

- Distributed Systems
- REST APIs and Platform Architecture
- Cloud (AWS, Google Cloud, Azure)
- Relational DBs (Postgres, MySQL)
- DevOps (CI/CD, CDK, Containers)
- Scalability and Performance Optimization
- Agentic Al Development Tooling
- Software Architecture and Design
- NoSQL (DynamoDB, Elasticsearch, Redis)
- OpenAPI, Protobuf

Languages: Java, Python, Rust, Scala, Ruby, Go, Typescript, Javascript

Experience

Oct 2020 - Senior Software Engineer, Amazon Web Services (EFS), Boston, MA

- Present O Designed and built distributed filesystem cross-region replication platform using Java, Python, and AWS
 - Led agentic AI and GenAI coding adoption across EFS organization (50+ engineers), including tooling development, training, and coding agent supervision tools.
 - O Built end-to-end simulation system for fault-tolerant distributed systems.
 - Optimized platform performance achieving 4x throughput improvement; mentored team of 8 engineers.

June 2017 - Principal Software Engineer, Datto, Boston, MA

- Oct 2020 O Technical lead on 0-to-1 SaaS platform redesign using Scala, Elasticsearch, and ZFS. Platform supports millions of users and dozens of petabytes of data.
 - O Built reusable monitoring platform handling hundreds of millions of events daily; prototyped features including backup visualization and Azure Exchange restore.
 - Provided architectural guidance and mentoring to three scrum teams; collaborated on product roadmap and technical direction.
- Nov 2013 **Senior Software Engineer**, *Datto*, Boston, MA

- June 2017 O Built distributed backup system supporting 1M+ daily users using Ruby on Rails, Redis, PostgreSQL, Cassandra, and S3.
 - O Led 7-developer team delivering Office 365 Backup/Restore solution on schedule; presented at DattoCon
 - Created open-source Cassandra client and API framework handling tens of millions of daily requests.

Apr 2012 - Software Developer / Team Lead, mDialog (acquired by Google), Toronto, ON

- Nov 2013 O Built distributed video streaming platform from 0-to-1 in Scala/Java/C with REST APIs, scaling to 250K concurrent streams across 50+ machines.
 - Open-sourced asynchronous Redis, HTTP, and ZeroMQ Scala libraries.

Education

M.Sc. Computer Science, University of Toronto (2012) • B.Sc. Mathematics/CS, UBC (2009)

Selected Projects

Open source: Claippy (Rust GenAl CLI coding tool), CassSchema, Pyper • Personal: anorwell.com, SNPReporter (Rust genetic analysis)
